

box of 30 daily contact lenses

HydroSi 70 Daily

extended comfort
soft lens delivering
up to 3 times more oxygen

The new generation of contact lenses, to which HydroSi70 Daily belongs, combines the benefits of silicone's high oxygen transmissibility with regular hydrogels' softness and user-friendly handling. A lower modulus, a suitable water content and a softer edge of the lens guarantee a higher rate of success while fitting, even for absolute beginners.

The lenses are immersed in hyaluronic acid buffered saline solution, with wetting and lubricant properties, for a better fitting and increased comfort, especially during the first hours of wear.

Advantages

- + Generic box with private label sticker
- + D Available in stock
- + MOQ non richiesto
- + Improved edge design for extra comfort over a longer period of time
- + High water content
- + Three times higher oxygen transmissibility
- + Low modulus that makes the lens softer and more comfortable
- + Lens immersed in hyaluronic acid buffered saline solution, with wetting and lubricant properties, for a better fitting and increased comfort, especially during the first hours of wear

Technical file

Material	Unifilcon B
Water content	53%
Geometry	Aspheric
Base curve	8,60 mm
Diameter	14,20 mm
Central thickness	0,07 mm (at -3,00 Dt)
Dk/t	0,68 Mpa
Modulus	64
Power range	+6.00Dt ~ -10.00 Dt -12.00 to -6.50 (0.50 step) -6.00 to +4.00 (0.25 step) +4.50 to +6.00 (0.50 step)
